

# PROJECT SNAPSHOT: Meeting cGMP Requirements

\$10B Academic Medical Center

## OVERVIEW

The 5,000 SF pharma lab needed to meet specific cGMP requirements and plan for them early – including aspects like temperature, humidity, sequencing and power – that would ensure drug purity and quality.

## APPROACH

Mortenson's dedicated team:

- Committed time with **lead researchers** who will use the space to understand their specific needs and preferences
- Collaborated on a **block workflow** diagram that allowed for optimal programming and space planning specific to cGMP
- Procured firms early to **engage the right partners** and mitigate cGMP related issues

## RESULTS

New advanced biopharmaceutical manufacturing space with adequately controlled manufacturing operations ensures the identity, strength, quality and purity of drug products by meeting cGMP requirements.
